Subject: RE: Spot Report Information

This is the update from the TCEQ emergency response program earlier this morning...

Facility is out of power but has diesel powered cooling trailers and enough fuel to cool for 6 days. There is no offsite discharge or fire at this time. Rideout crew (10 personnel) have boats to leave site if necessary. An update was provided to the county emergency management last night of the facility's situation.

With Regards, Steve

Subject: FW: Spot Report Information

Hi—

We are looking to issue a sport report on this and wanted to validate how high pressures might be and how imminent an explosion might be. I plan to come say hi in person. I think they are looking for a quick answer.

Thanks!
Dorothy

Subject: Spot Report Information

SAS,

We received a call from Jordan Nelms, NIMAT E1 Planning assigned to the Houston City EOC reporting the below listed information.

The Arkema Plant near the border of Harris County and Liberty County has reported an incident involving the buildup of pressure and an increase in temperature at their peroxide related facility. Local and county agencies

are responding and have initiated the implementation of protective measures. It was reported that in the event that an explosion occurs, there would be a 1.5 mile blast radius. No further information is available at this time.

Note that the above is being submitted to your Section for the issuance of a Spot Report in follow up to a discussion between Steve Turcott and David Rivas.

Thank you for your assistance.

Respectfully,
Bryan
